

Class Seminar for 5th Semester students, 2024

Department of Physics, Don Bosco College, Tura

A students' seminar was organized by the Department of Physics, under the charge of Dr. Yubaraj Sharma on the 24th of September 2024 for the 5th Semester students. The seminar was a part of continuous internal assessment.

Each group was assigned a topic based on the syllabus of Gamma and Beta Functions. Students were given freedom to present either on the white-board or PowerPoint through overhead projectors. All except one (group-F) used white-board (probably due to dense mathematical content). Each student was allotted about 15 minutes to present his/her presentation. The seminar was primarily conducted in the Physics laboratory and the last part in room 324 (due to clash with practical timings).

This exercise has three-fold advantage in that the students are given a platform to exercise their public speaking skills, the topics are mostly relevant for their upcoming exams and the allocation of internal marks provides the incentive to take this task seriously.

The seminar concluded satisfactorily.
